Electronic bracelet

The idea is an Electronic bracelet which is programmed to know if someone near to it by sending Electromagnetic waves.

First :

It will be given to the visitors when they inter the hall.

Then we have a device that have a sensor when the person just enter the hall the Electronic bracelet will start working.

Secondly:

If the hall contains of Seatings and every seat has a number which also be the same number in the Electronic bracelets.

Once the Electronic bracelet get close to another Electronic bracelet then the The shaker will work and Beep.
